.....

Electric, Connected, and Automated – the fabric of surface transportation is changing rapidly, and it’s being led by the vehicles that use our network. Steve Kuciemba, the National ITS Director at Parsons Brinckerhoff, will give a brief overview of the many initiatives planned or already in motion that will begin to influence this shift in vehicular transportation. He will review the recent announcement from NHTSA about connected vehicle regulation. He will talk about the upcoming ITS World Congress to be held in Detroit this Fall, where many of these advances will be on display for the whole nation to see. And most importantly, he’ll touch on how this might impact our focus on transportation management, the deployment of ITS, and our efforts to move people and goods safely, efficiently, and reliably.

.....

Stephen Kuciemba is a Vice President and National ITS & Systems Operations Manager at Parsons Brinckerhoff, Inc. He is currently the Deputy Project Manager for Infrastructure on the massive USDOT Safety Pilot Model Deployment going on in Ann Arbor, Michigan.
