

Session Time: 1.5 hours

This session will provide an overview on the features and benefits of the ATC series intersection control cabinet. The session will review the features and benefits as well as showcase how the best practices and features of the NEMA TS1, TS2, Caltrans, and the ITS version 1 Cabinet evolved into the ATC cabinet. The fundamental principles of how the ATC cabinet is an improvement to safety, efficiency, and operational expenses will be reviewed. The session will also provide training on the functionality of the new assemblies and components as well as provide real world use cases, deployment, and troubleshooting experience.
